

REMARKS

It has recently come to Applicants' attention that the sequence listing previously submitted contains two errors. Specifically, SEQ ID NO:2 in the previous sequence listing contains an extra "T" at position 5993 (which increases the number of nucleotides by one), and also a deletion at position 6454 where an "A" was inadvertently deleted (which counteracts the insertion at position 5993 and results in SEQ ID NO:2 having the correct number of total nucleotides). These errors are apparent if one compares the previously submitted sequence listing with the sequence disclosed at page 67 of the specification. In fact, the insertion at position 5993 appears to have originated from an error in Figure 2D, which was the subject of a declaration in related application 08/475,813 submitted on January 4, 1996.

Thus, Applicants have attached hereto a corrected sequence listing and a corresponding CRF, as well as a statement indicating that the two are the same and that no new matter is included. Applicants note that corrected sequence listings are also being submitted in related pending cases.

If the Examiner has any questions concerning the corrected sequence listing, he is kindly requested to contact the undersigned at the telephone number listed below.

Respectfully submitted,

PILLSBURY WINTHROP LLP
